

Listing of Claims:

1. (Currently Amended) A medical image photographing system comprising a control apparatus for corresponding a photographing order information related to medical photography and a medical image and managing them, and a portable terminal for obtaining
5 the photographing order information from the control apparatus;

wherein the control apparatus comprises a first communication unit for communicating with the portable terminal, and a first control unit for transmitting the photographing order information through the first communication unit to the portable
10 terminal; [[and]]

wherein the portable terminal comprises a second communication unit for communicating with the control apparatus, a display unit for displaying [[a]] display information, and a second control unit for receiving the photographing order
15 information from the control apparatus through the second communication unit, extracting the photographing order information corresponding to a predetermined extract condition from [[a]] the received photographing order information, and displaying [[a]] the extracted photographing order information on
20 the display unit; and

wherein the second control unit computes an additional information having one of or both of a size and a number of a

25 photograph from the photographing order information to be
extracted, and displays the additional information and the
photographing order information on the display unit.

Claims 2-7 (Canceled).

8. (Currently Amended) A medical image managing method
[[in]] for a medical image photographing system comprising a
control apparatus for corresponding a photographing order
information related to medical photography and a medical image
5 and managing them, and a portable terminal for obtaining the
photographing order information from the control apparatus, the
method comprising:

transmitting the photographing order information to the
portable terminal in the control apparatus; [[and]]
10 receiving the photographing order information from the
control apparatus, extracting the photographing order information
corresponding to a predetermined extract condition from [[a]] the
received photographing order information, and displaying [[a]]
the extracted photographing order information in the portable
15 terminal; and

computing an additional information having one of or both of
a size and a number of a photograph necessary for imaging from
the photographing order information to be extracted and

20 displaying the additional information and the photographing order
 information in the portable terminal.

Claim 9 (Canceled).

10. (Currently Amended) A medical image managing method
 [[in]] for a medical image photographing system comprising a
control apparatus for corresponding a photographing order
information related to medical photography and a medical image
5 and managing them, and a portable terminal for obtaining the
photographing order information from the control apparatus, the
method comprising:

 extracting the photographing order information corresponding
to a predetermined extract condition from the photographing order
10 information and displaying [[a]] the extracted photographing
order information in the control apparatus; and

computing an additional information having one of or both of
a size and a number of a photograph necessary for imaging from
the photographing order information to be extracted, and
15 displaying the additional information and the extracted
photographing order information in the control apparatus.

11. (Currently Amended) The method of claim 10, further
comprising:

transmitting the extracted photographing order information
to the portable terminal in the control apparatus,

5 receiving the extracted photographing order information from
the control apparatus, and

displaying the extracted photographing order information in
the portable terminal.

Claim 12 (Canceled).
